RE: Operations Advisory – South Spine Non-Potable Pipe Repair

Contract Operator will be repairing a leak in the non-potable water piping at the south end of the spine. The isolation valves will require the non-potable water to be turned off in buildings 9070 and 9072. This will prevent flushing of toilets and urinals in buildings 9070 and 9072.

Please take note of items below:

- **June 23rd Test of the Isolation Valves** – On Wednesday evening - June 23rd from 6:00 PM to 6:15 PM the non-potable water system will be turned off to allow for testing of the isolation valves.
- **June 24th Drain Down** – On Thursday June 24th starting after 2:00 AM the non-potable water system will be isolated and drained down to allow the contractor to perform the repairs.
- **June 24th Repair** – On Thursday June 24th starting at 4:00 AM the contractor will begin the repair of the leaking piping. The anticipated completion time of the repair and restoration of the non-potable water flow is by 6:00 AM.

While the non-potable water system is down, restrooms will be available in the southeast corner of building 9022 and building 9040.

The pressure fluctuations may cause small items in the piping to become dislodged and building operators may wish to plan cleaning of strainers in the flush valves after the work has been completed.

If you should have any questions, please do not hesitate to contact Sherrie Wofford at OccupantServices@uastp.com. In addition, please visit www.uastp.com to stay informed on recent operational advisory announcements.

Thank You.
